New transmission oil filter kits from MANN-FILTER

Everything workshops need – for a smooth change of transmission oil filters in passenger cars.

Ludwigsburg, 26. August 2026 – MANN-FILTER is expanding its portfolio for passenger cars and is now offering fully equipped service kits for the European vehicle fleet for the first time. Depending on the application, the new sets not only contain the right filter, but also all the accessories required for a smooth and professional change. This provides workshops and wholesalers with an all-round worry-free solution that saves time, creates safety and reduces error rates.

One set – everything included

Precision is crucial when servicing an automatic transmission. In practice, however, important components for service are often missing, which leads to avoidable delays and additional effort. "Our new MANN-FILTER kits for automatic transmissions solve this problem," says Melanie Moreno, Product Manager at MANN+HUMMEL. "Each kit contains exactly the suitable filter including all necessary accessory components – tailored to the respective vehicle model and transmission." Depending on the application, the kit includes seal, drain plugs, magnets, mounting bolts and oil sump.

More efficiency in everyday workshop operations

As all relevant parts are included in a single set, incorrect orders are much less likely. At the same time, the risk of installation errors is reduced because no essential accessories are missing and everything is perfectly prepared for the

specific service. Downtimes are also noticeably reduced, as workshops can start servicing directly without the need for additional procurement.

"With our new service kits, we offer workshops a true 'No Worries' solution," explains Moreno. "Our customers can be sure that all components are included in full and in the usual high MANN-FILTER quality."

Moreno adds: "Transmission oil filters are often considered a lifetime product on the market. However, we recommend considering a replacement after about 80,000 kilometers – or at the latest when the shifting becomes sluggish."

Market launch

When the product portfolio launches in September 2026, it will initially include 30 items, with more to follow later in the year. The kits cover models from major European car manufacturers as well as selected Japanese brands such as Nissan. With this, MANN-FILTER is expanding its range in the passenger car sector with a practical, efficient and reliable solution.

More information is available to workshops and dealers on the MANN-FILTER website: https://www.mann-filter.com/en/parts/special-applications/transmission-oil-filters.html.
